

BMKG REGIONAL TRAINING CENTRE FOR RA V, INDONESIA

Designing the Indelible Moment of OGD#100: a celebration of the 100th Online Group Discussion

Australian VLab Centre of Excellence Regional Focus Group (RFG),
August 13th 2020

OUTLINE

TOPICS TO BE COVERED

OGD Facts and Figures
Topics Coverage
The Indelible OGD#100
Way Forward

What is Online Group Discussion (OGD)?

Online Group Discussion is a monthly event with the concept of presentation and discussion on certain predetermined themes, i.e Meteorology organized by BMKG Education and Training Centre.

Numerous topics to updated in the field of weather, climate, earthquake, database, AI and other update issues in BMKG

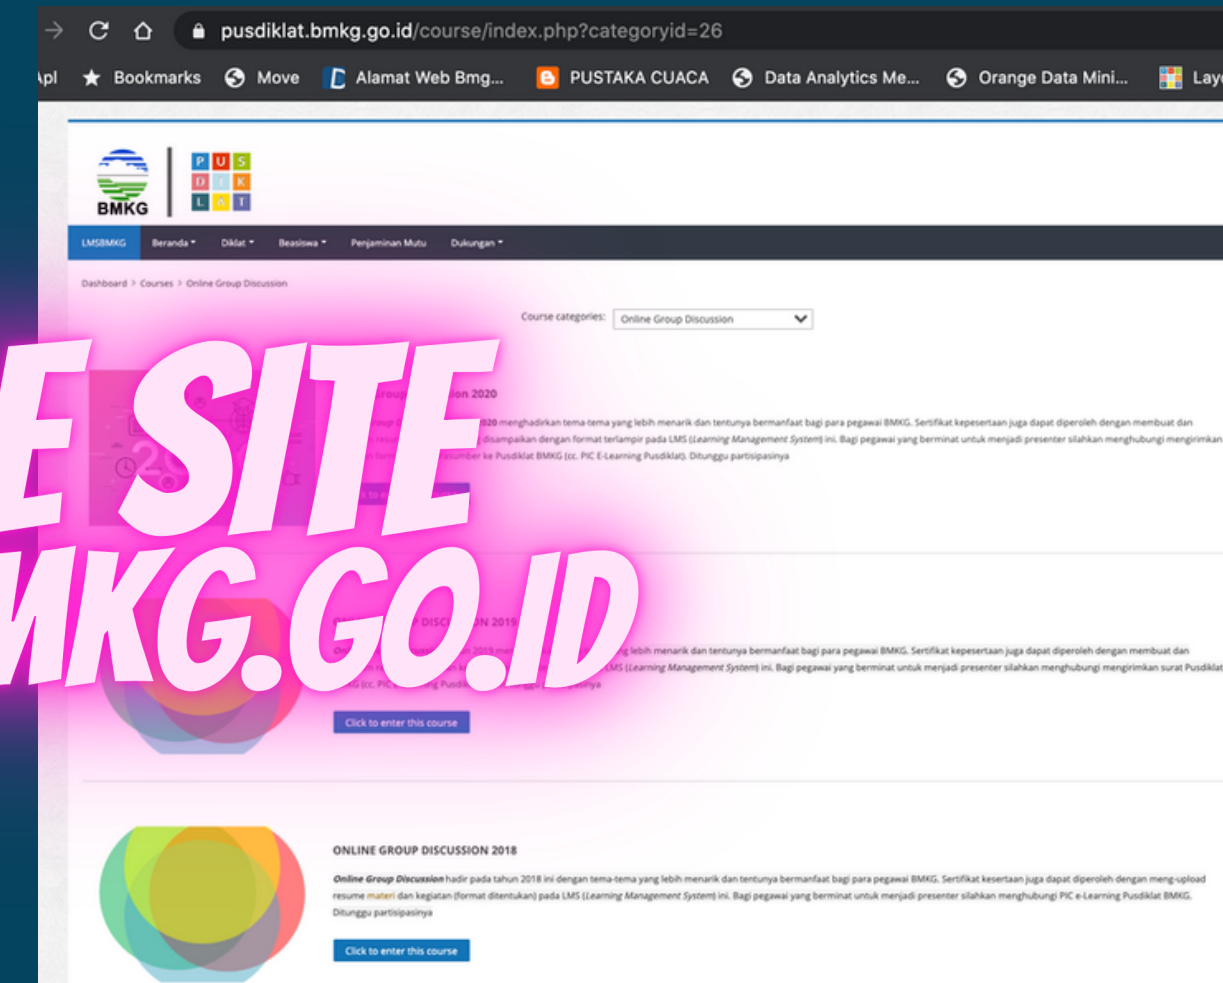

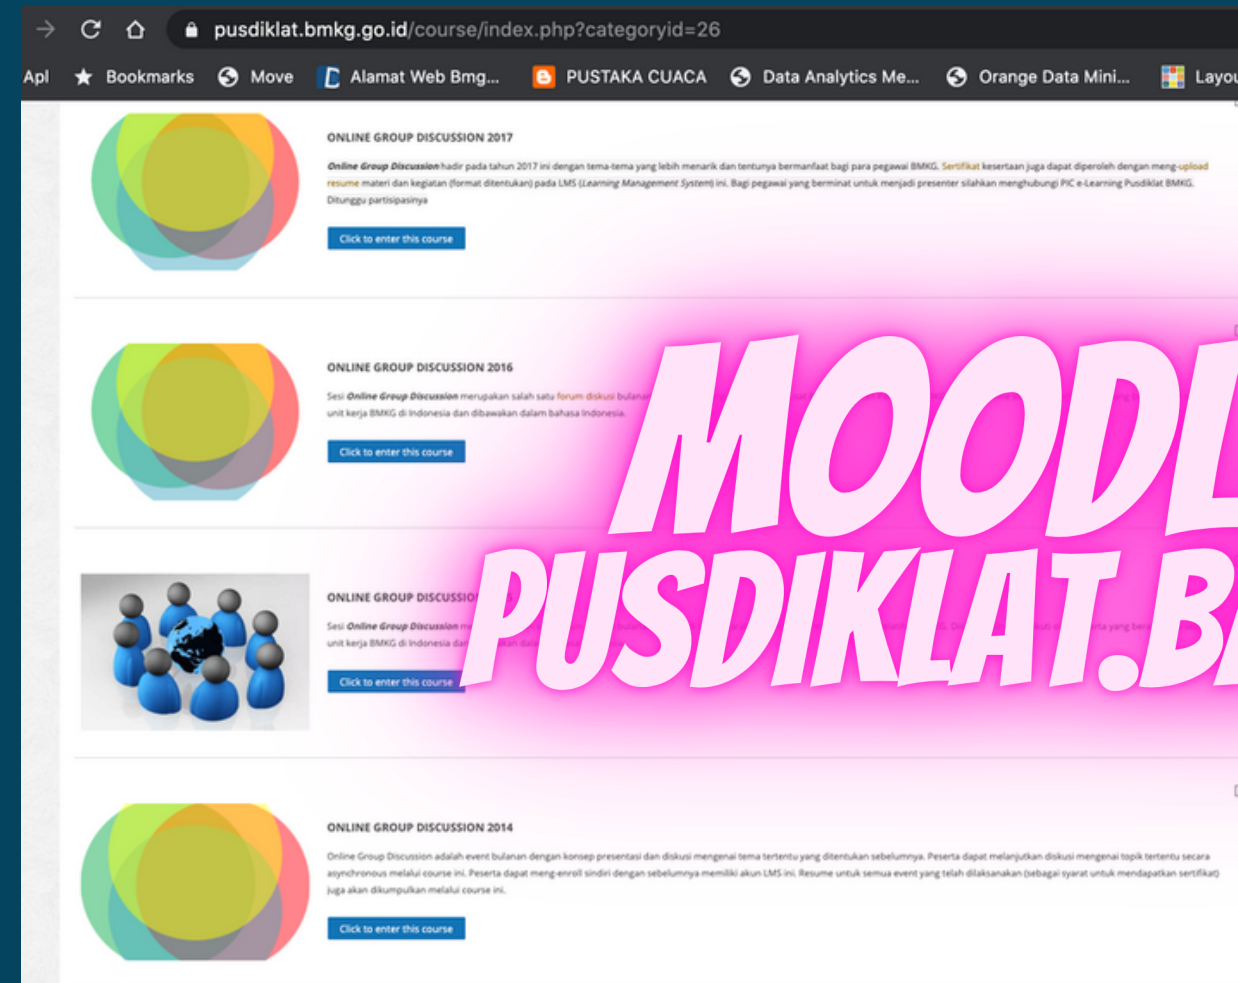

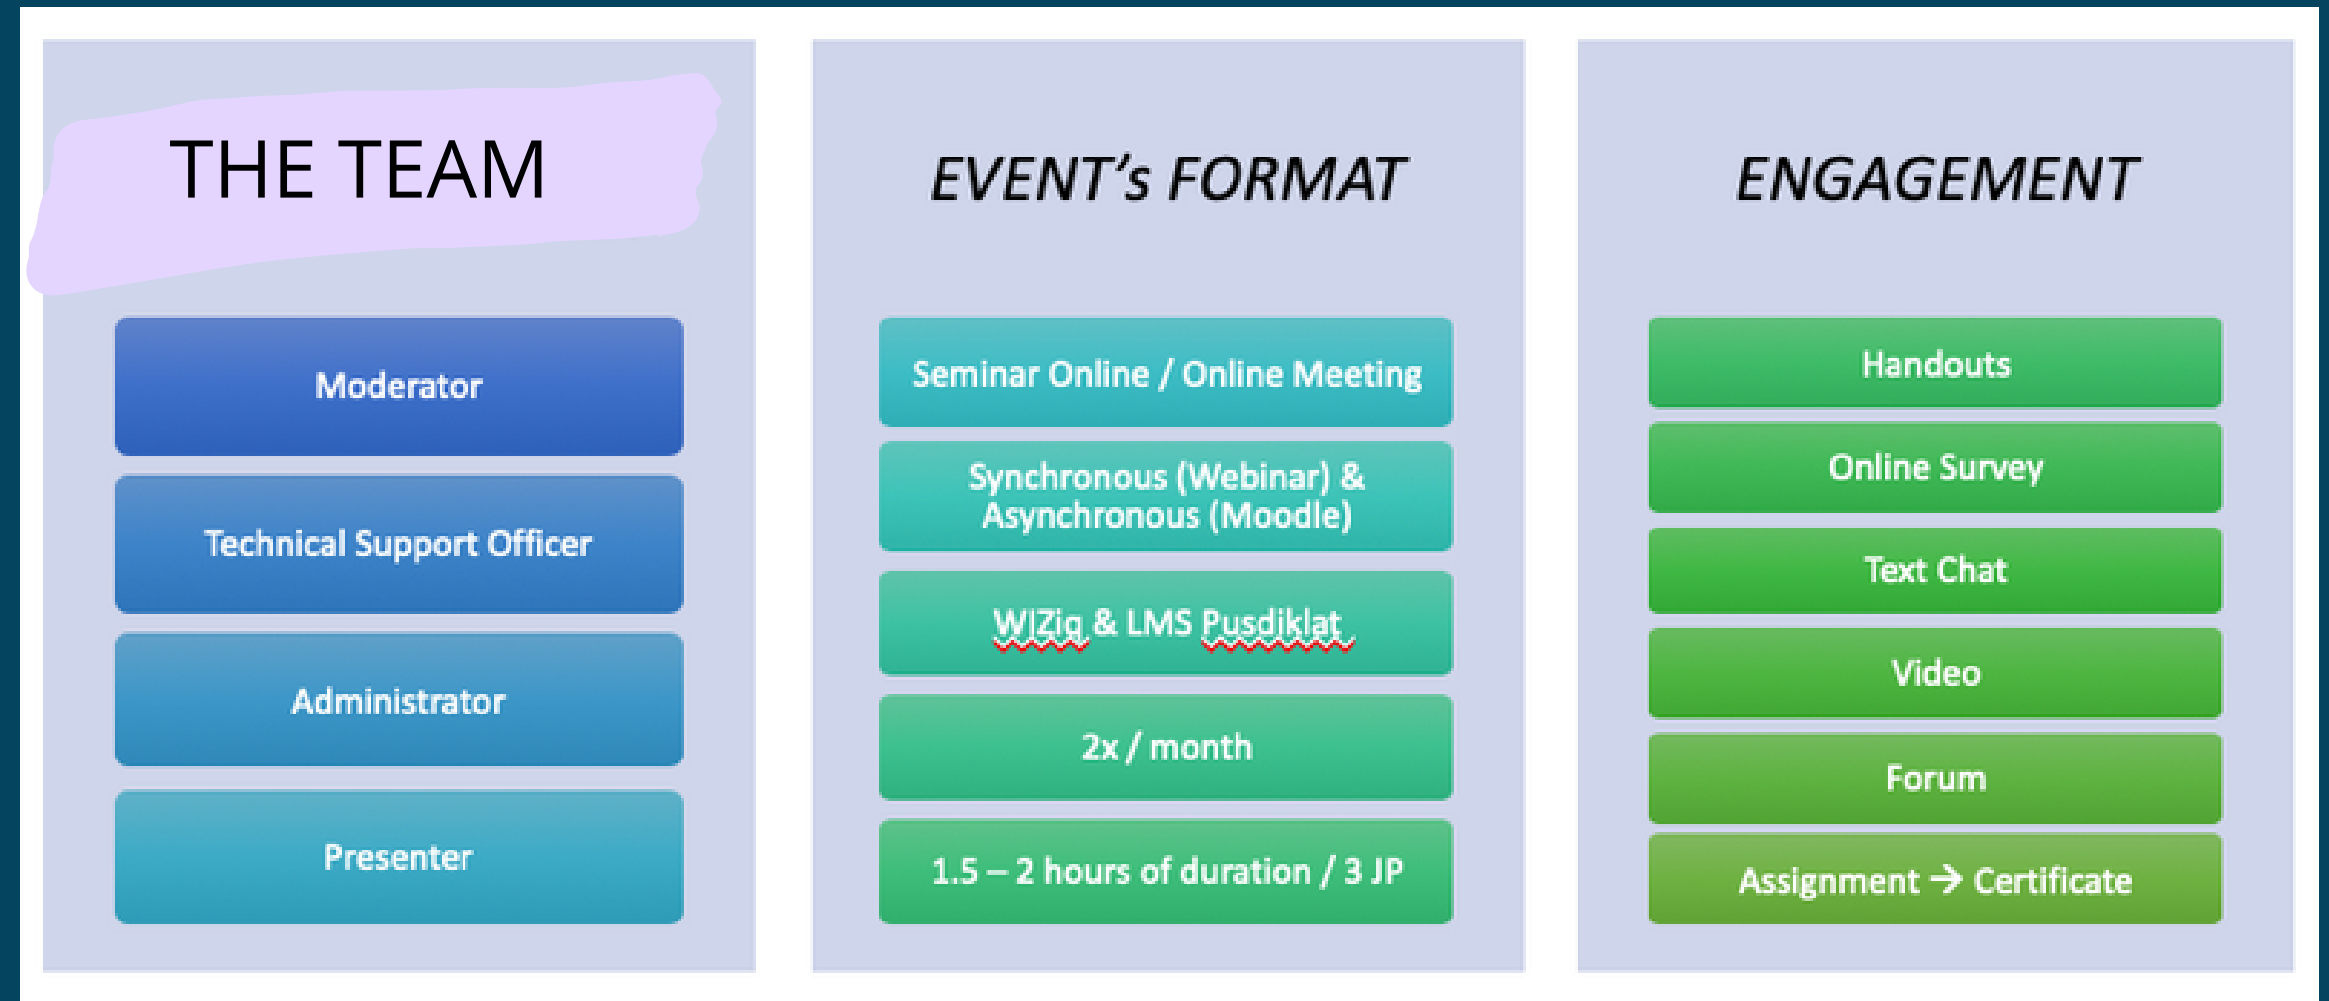

#OGD *Bingo*

Joining together in 1 location to save the valuable bandwith	Being a Presenter BMKG National Event	Presentation resume as a knosledge and skill evaluation
Spreading updates in knowledge, technology, regulation, etc.	FREE	Getting new perspective on new issues
Question and Answer	Social Media involvement	Certificates. YEAAYY!

The platform utilized in this event are webinar software of Wizlq with max 200 participant/user and Zoom Meeting with max 500 participant/user

and Moodle for all OGD repositories from 2014 - recently.

May 16th, 2014

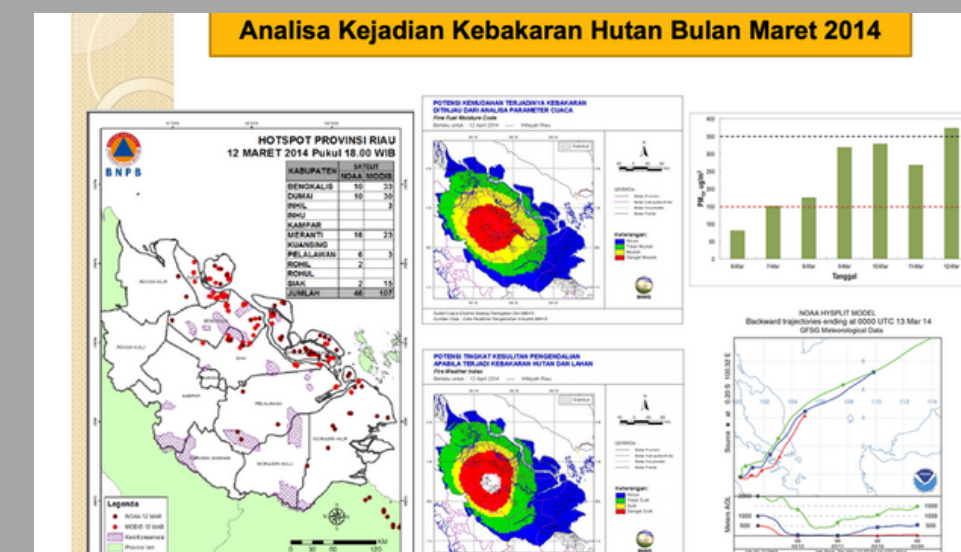

Recommendation:

1. **"Smart Assimilation"**: Combining in-situ observation data (Rainfall) and satellite observation data (TRMM)
2. **Fire Danger Rating System (FDRS)** is one of the systems forest / land fire early warning that can be used for provide input on decisions related to prevention, mobility and fire suppression. Forest Fire Weather Index (**FWI**) calculated from measurements of air temperature, relative humidity, velocity wind and rainfall. Besides taking into account topographic factors, vegetation, and surface conditions.

Assimilation of Insitu Rainfall with Satellite Data:
Basis for Indonesian Grid Data

The FDRS Early Warning in Forest and
Land Fire Prevention

TROPICAL CYCLONE GENESIS

Ratih Prasetya, S.Si
Pusat Pendidikan dan Pelatihan
Online Group Discussion Desember 2017

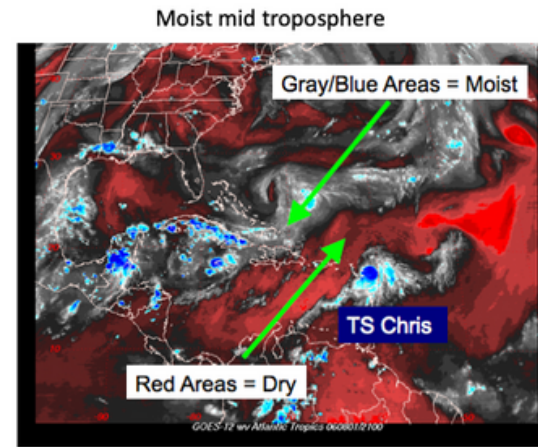

1. "Tropical Cyclone Genesis"
2. "Analysis of Atmospheric Dynamics during Cempaka and Dahlia Tropical Cyclones"

NECESSARY CONDITIONS FOR GENESIS (Gray, 1968)

Pre-existing synoptic disturbance
Significant planetary vorticity
Favorable wind shear pattern
Moist mid-troposphere
Warm ocean, deep mixed layer
Conditionally unstable atmosphere

Dynamical
parameters

Thermodynamic
parameters

Goes-12 Water Vapor 1-August 2006

THEORIES OF TC GENESIS (I): CISK

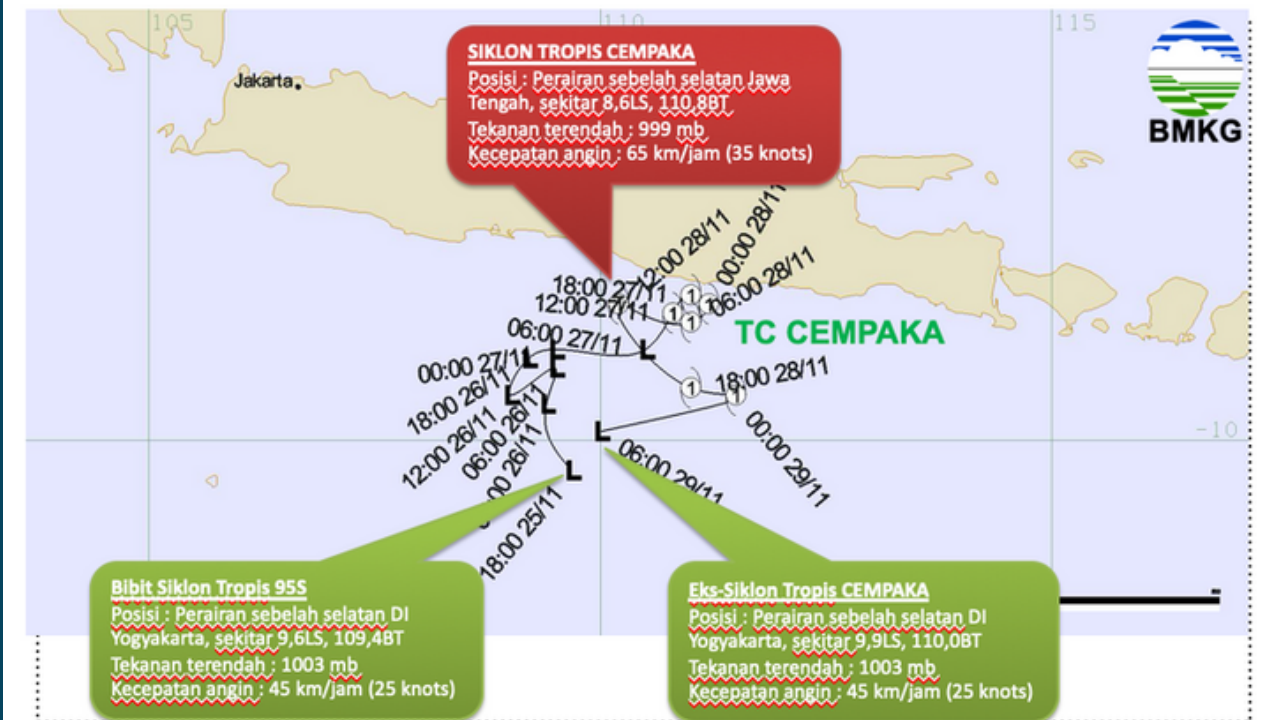

- CISK (**Conditional Instability of the Second Kind**) A process whereby low-level convergence in the wind field produces convection and cumulus formation, thereby releasing latent heat.
- Theory developed by Charney and Eliassen (1964), Ooyama (1964)
- Basic Assumption:
 1. Initial perturbation is a synoptic-scale wave
 2. Frictional Convergence in Latent heat release above center of low-level cyclonic vorticity
 3. Magnitude of latent heat release proportional to Ekman pumping
 4. Large CAPE (Convective Available Potential Energy) is required

Climate Change Application

OGD#33 2017

1. Dr. Julia Barrot & Dr. Sukaina Bharwani (Stockholm Environment Institute, Sweden, Earth Sciences Researcher), presenting about Climate Knowledge Brokering: Concepts and Approaches for Increasing the Uptake of Climate Information.

The importance of climate information in decision-making

Near-term

- How are our water resources? Do we need to conserve water?
- When should we plant crops? What should we plant?

Medium-longer term

- How might climate change impact future water availability?
- How might climate change impact agricultural productivity?

Near-term

- What climate-related disasters might occur and when/where?
- How severe will they be?

Medium-longer term

- Are disasters likely to become more frequent/severe?
- Are disasters likely to strike new/different places compared to the past?

Barriers to using climate information

Supply-side barriers; Information is perceived by the user as not being...

- **Accurate/reliable** – they do not think the information is (consistently) correct.
- **Legitimate/credible** – they do not think they can **trust** the information.
- **Salient** – they do not see how the information is relevant to them.
- **Accessible** – they cannot (easily) access the the information.
- **Valuable/useful** – they do not think the information is useful in their decision-making.
- **Usable** – they do not see how they can use the information, or find it difficult to use.
- **Timely** – the information is not delivered/accessible when they need it most.
- **Provided at an appropriate scale** – the scale that the information is provided at is not useful (it is too board or too narrow for their decision-making).
- **Associated with excessive uncertainty** – the level of uncertainty might inhibit the use of the information in their decision-making, or their lack of understanding of uncertainty may make them distrust the information.

Low/no regrets decision-making & early planning

No-regret adaptation (IPCC): Adaptation policies, plans or options that “generate net social and/or economic benefits irrespective of whether or not anthropogenic climate change occurs”.

Low-regret options (DFID, 2014): Promising ‘early’ adaptation options, including those that address current adaptation needs, but also future-orientated, low-cost options that build resilience, flexibility or robustness, as well as capacity.

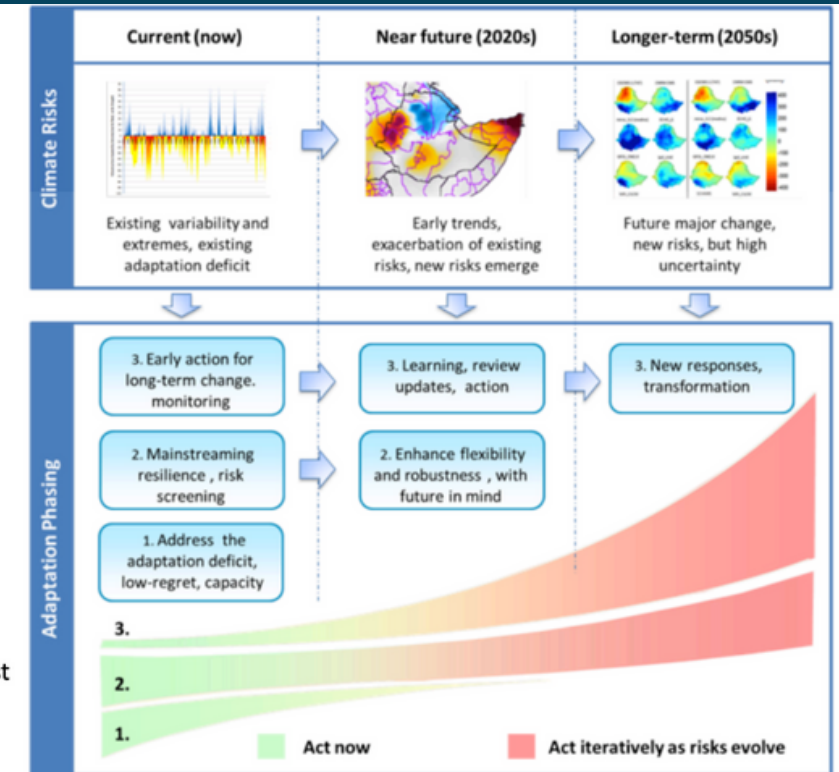

Figure 1: Categorisation of adaptation pathways. Source: Watkiss, 2014 (DFID, 2014; IDRC, 2015)

After Watkiss et al., 2015

Example: Rapid growth in a changing climate

- **Decision maker:** Urban planner for a fast-growing city
- **Decision context:** Planning for big changes in development paths and climate trends with limited resources to address them.
- **Activity:** Infrastructure planning
- **Objective:** Climate-resilient development
- **Time-scale:** 2-20 years
- **Resolution:** Various

Examples of Information needed:

- How will climate change affect our city infrastructure? Who and what will be most impacted?
- Will the infrastructure investments we are making now withstand these changes?

Short term (next week): Are there extreme events we need to prepare for?

Medium term (next season/year): Which infrastructure projects do we approve?

Longer term (coming years): Which parts of the city are vulnerable to future climate impacts?

Let's Respond: Integrating climate change response into Municipal IDPs

THE INDELIBLE OGD#100 MULTIMEDIA OPTIMIZATION

VIDEOS, FLYER/BANNER

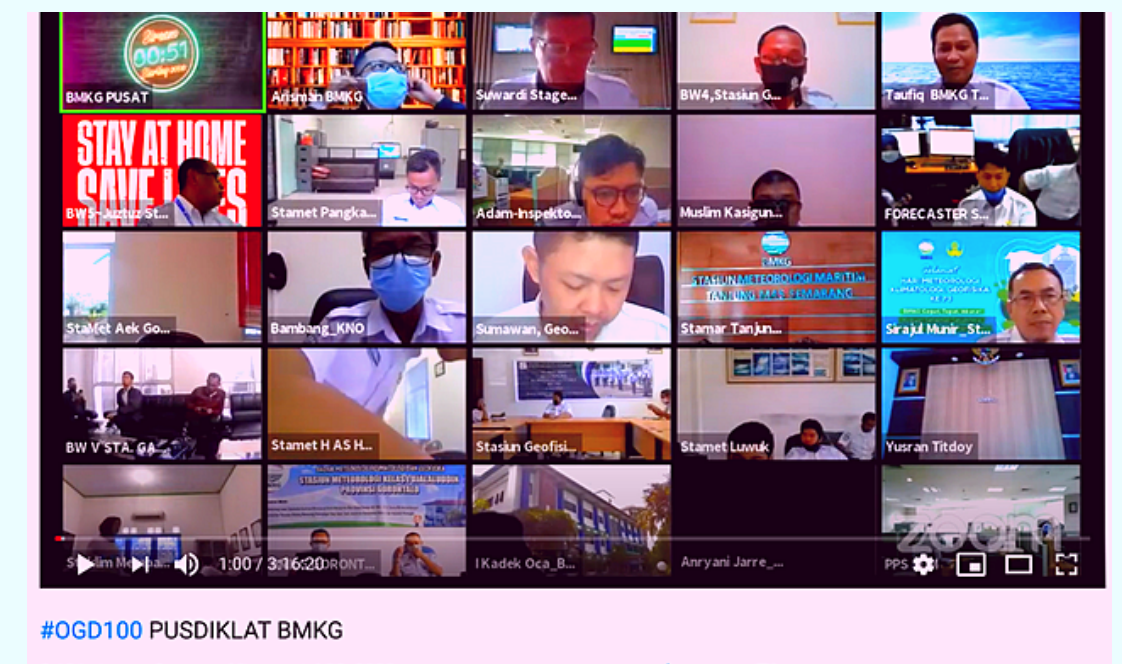

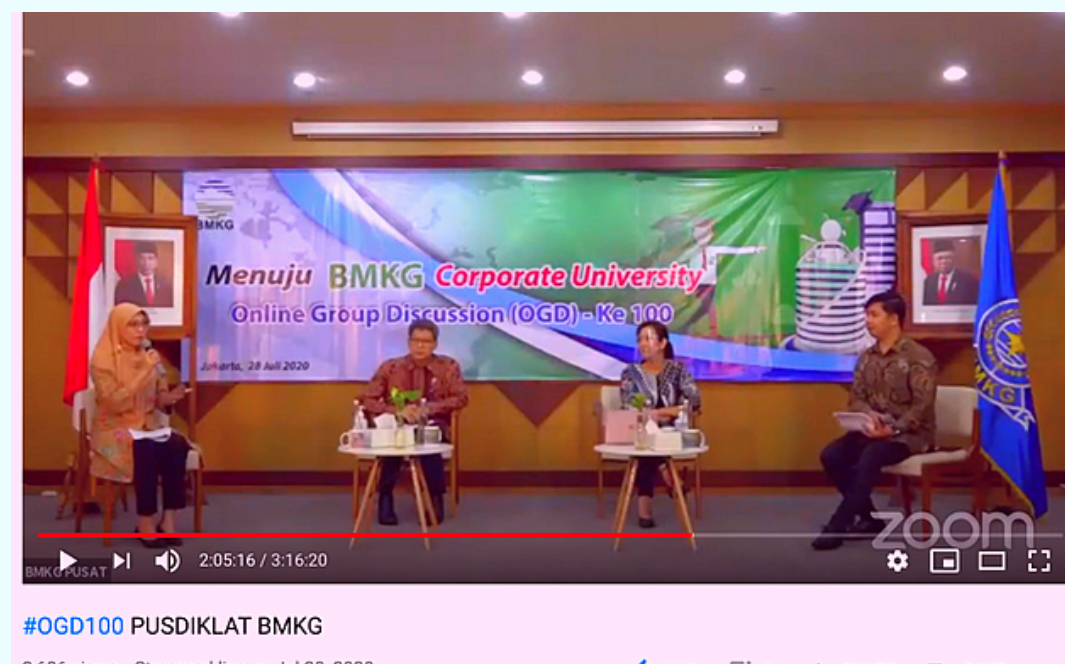

We were creating and editing 13 videos, many flyer and banner for advertising the event

The event successfully held through great collaboration between BMKG ETR Team & the Communication Network Division of > 25 people.

THE INDELIBLE OGD#100

THE EVENT

SPECIAL TOPICS

Presenting organization current issue of Value Transformation change into BMKG Corporate University: a learning organization declared by Head of BMKG

ZOOM & YOUTUBE

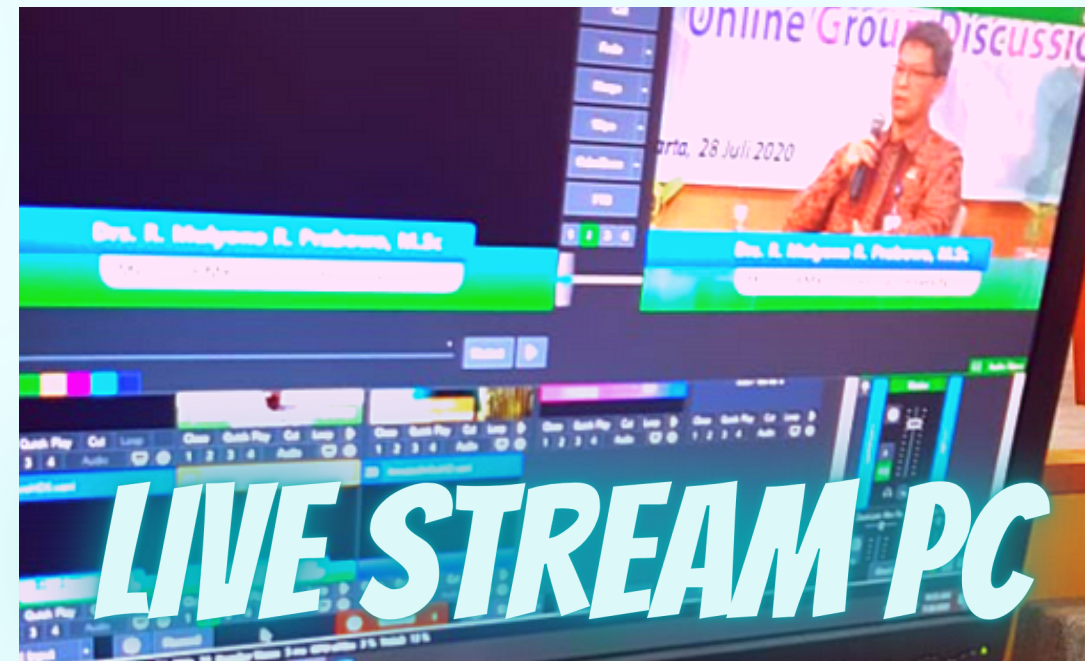

Utilizing Zoom Meeting with 418 users and live stream for 2 hours through Official BMKG Youtube Account with 324 users. The Recording in YT has reach 2686 Views per Aug 11 at 1.49 PM.

1780 AUDIENCES

Internal and External BMKG resulting 1193 certificates!
